Introduction

Version V-2: The levels of the scale (1-5) in the analysis tables have been updated and adjusted to more accurately reflect the impact of each aspect evaluated.

Este documento presenta el análisis FODA del change request. El propósito es evaluar los factores internos y externos que influyen en la implementación de nuevas funcionalidades de auditoría, considerando la arquitectura actual y los recursos humanos disponibles.

Objectives

1. Identificar las fortalezas.
2. Evaluar el impacto de la carga de trabajo en los roles..
3. Analizar las oportunidades de mercado y referencias con clientes gubernamentales.

SWOT analysis

Strengths The Clean + Local-First architecture already supports native storage within devices for auditing, so we can continue with the current structure. There are no major technical changes.	Weaknesses Additional work for the roles of Senior Crypto and Backend Rust AL will involve taking on additional, unforeseen work.
Threats Reorganization of the work plan and redistribution of tasks.	Opportunities The government requester may become a reference client or provide positive testimony if the feature is delivered well and on time.

Result

The analysis shows that strengths, such as support for the existing architecture and low technical impact, are rated at 4. The opportunity to obtain a government client reference stands out with the highest score of 5. On the other hand, the critical weakness identified is the overload of key roles with a score of 2, while the threat from readjusting the work plan is considered the least concern with a score of 1 (Very Low).

Category	Aspect	Description	Scale (1-5)
Strengths	Support of existing architecture	The Clean + Local-First Architecture already supports native storage within devices for auditing, allowing us to maintain the current structure with no major modifications.	4
Strengths	Low technical impact	There are no significant technical changes at the implementation level.	4
Weaknesses	Overload of key roles	Additional work on the Sr. Crypto & Security and Backend Rust Dev roles due to additional work (history encryption, DELETE/EDIT operations, and validations).	2
Opportunities	Government client reference	The government requester may become a reference client or provide positive testimony if the feature is delivered well and on the new schedule.	5
Threats	Work plan readjustment	Readjustment of the work plan and redistribution of tasks across the entire team to avoid overlapping schedules, which may cause delays in other tasks.	1

Scale Legend (1-5)

1 = Very Low / Very Weak / Insignificant impact

2 = Low / Weak

3 = Moderate / Acceptable

4 = High / Strong

5 = Very High / Very Strong
